## Organisation profile

SWD Factory - software development company focused on creating innovative Internet-based solutions that enhance and optimize business processes. Since 2002 our highly skilled team has been providing IT solutions on Baltic, European, CIS and USA markets. Our solutions are focused on the following areas:

Passenger transportation;

Cargo transportation and logistics;

Electronic document circulation and order management in retail;

Designing and modeling of engineering processes.

## Main ITS activities: Products and projects

BusEurope.eu – integrated Internet based ticketing and booking System that interacts with the ticketing systems of participating Coach Operators

BusTicketPro - is a full scaled hosted ticketing system for Coach Operators and/or Coach Terminals that is offered to customer on a subscription basis

VIPUS – Latvian national railroad ticketing system. The System is implemented at every railroad station in the country. The System provides ability to purchase tickets to any route from any Latvian railroad station.

«AED Portal» - Complex of solutions that provides services for registration of transport and commercial documents with the real-time automated control of the data, according to the informational base of rules and regulations and providing correct registration of transportation documents in the railroad services, custom authorities and other control entities.
